
Suggested Resources for Skin Cancer Education in Elementary Schools

Because of limited resources the Foundation is unable to provide direct services to elementary schools but elementary school health teachers are encouraged to attend high school workshops. Excellent low cost and free resources are available to elementary schools from other organizations. We recommend using a combination of the video, "Gear Up for Summer," and EPA "SunWise" materials.

Gear Up for Summer Video

The 10 minute "Gear Up for Summer" video may be ordered for \$5.00 (including shipping) from M.D. Anderson Project Safety by downloading an order form from

www.mdanderson.org/departments/projectsafety/

Clicking on the "Gear Up" video link will take you to information and the order form.

A 24 minute video, "Killer Tans," is also available from the same source (also \$5) but may only be ordered by e-mail to smadigan@mdanderson.org.

SunWise Materials

In conjunction with "Gear Up for Summer" we recommend EPA **SunWise** programming materials, which includes grade-appropriate classroom lessons and activities suitable for a single session, part of a session, or multiple sessions. Complete information and the **SunWise School Program Guide** is available at

www.epa.gov/sunwise

The program guide contains a short application form that enables any elementary school, public or private, to receive the SunWise materials at no cost.
